

## DRAINING YOUR SPA

We recommend that you drain and clean your spa no more than 3 or 4 times per year, depending on how frequently you use it and how well you maintain your water. In most cases this simple process will only take about an hour to accomplish.

Innermost closed position

Middle open position

Outermost closed position

### Drain Location:

The drain is located in the center of the Dura Floor directly under the topside control panel. This is the innermost closed position.

### Step 1:

Using your hand, pull and slide out the drain plug to the outermost extended closed position.

### Step 2:

Unscrew the cap. In this extended closed position, water should not drain out.

### Step 3:

Screw on a garden hose. Place the other end of the hose in the area you want the water to drain to.

### Step 4:

Once the hose is in place, push in the hose/drain valve half way to the middle open drain position and drain your spa.

### Step 5:

When you are done draining your spa, reverse these steps to close the drain (step 3), screw on the cap (step 2) and push in the drain valve to the innermost closed position.

\*Note: if you push it in all the way to the innermost closed position, the water will not drain.
